Given the record accumulation behaviors in stocks last week (WE 10/17) after a 10% decline in the [\\$SPX](#), how do we compare to early May 2014?

**Erik Grywalski** @egrywalski · Oct 18
On the WE 05/02, we had the most accumulation behaviors in stocks since late-Feb. Following that + profile, we rallied 12% into the 9/19 H.

**Erik Grywalski** @egrywalski · Oct 18
As I've stated, accumulation during a decline doesn't suggest a low, but it helps you evaluate the 8% drop from the market's perspective.

**Erik Grywalski** @egrywalski · Oct 18
On a + note, we've had the deepest decline in the [\\$SPX](#) in 2 yrs, but 2 out of the last 3 weeks have shown accumulation behaviors in stocks.

**Erik Grywalski** @egrywalski · Oct 18
Stocks showed the most accumulation behaviors of 2014 despite the decline in the [\\$SPX](#). Here's my wkly update>historicalstockresearch.com/public/departm...

Market analysis from Saturday, October 18, 2014

Erik Grywalski @egrywalski · Oct 18

We'll have to see how the market sets up (technically) after last week's drop before becoming bearish. Markets like to fool the majority.

Erik Grywalski @egrywalski · Oct 18

Despite the technical weakness since May, markets rarely go straight down. A rally wouldn't be surprising after undercuts in stocks/indices.

A potential outcome
based on common
behaviors of price.
